Technical Data Sheet

Keycal

Calcium Silicate is a synthetic mineral produced from cupola furnaces as a slag from producing iron and then cooled immediately in water to form a glass type substance.

Calcium Silicate is a versatile expendable abrasive used for cleaning a wide variety of substrates. By using different grades then the profile achieved can be changed, medium grade will at 100 psi at the nozzle give a minimum of 75 microns on mild steel. Calcium Silicate is suitable for use on stone, brick, non ferrous and wood substrates.

Grade	Particle size - Microns
Keycal1- Ultrafine	100 -200
Keycal2 -Fine	100-800
Keycal3 - Medium	250 - 1400
Keycal4 - Coarse	200 - 2000

Packed in 25 kilo plastic bags shrinkwrapped on pallets.

Single 25 kilo bags also available.

Hardness ; 5.0 - 6.0 mohs

Produced to ISO Standard ISO11126
